

SCUBA LUV DIVE REPORT
“CRITTER OF THE WEEK”
(808) 870-2738
”MAGNIFICENT STAR”

This star has 10-11 arms and can attain a diameter of 2’! It lives beneath the sand, occasionally betrayed by a star like mark in the sand. If lifted out, it sinks slowly back , digging busily with it’s thousands of large tube feet. They are voracious predators, feeding on heart urchins and other stars, swallowing their prey whole! They can move surprisingly fast. See Matt’s video on SCUBA LUV FACEBOOK page. They are extremely rare to see in the open!

DATE OF REPORT: APRIL 28, 2014
WATER TEMP.: 76 DEPTH: 41’
