

SCUBA LUV DIVE REPORT
“CRITTER OF THE WEEK”
(808) 870-2738
” CYERCE ELEGANS”

From the SACOGLOSSAN FAMILY, these amazingly shaped critters have flattened leaf-like “cerata” which are easily cast off when the animal is alarmed. Note the tiny white flecks of light on the tips of the cerata! So unusual and beautifully delicate these tiny creatures are quite active and very difficult to spot! This guy was about 1/2 “ long and had found a home inside a discarded mask!
